## To Whom It May Concern

Information about the origin of CTBA - donor material

The Cells + Tissuebank Austria exclusively procures bone tissue of German, Swiss and Austrian donors for production of allogenic bone regeneration materials.

Therefore for all cancellous bone replacement materials (granules for dental - botiss maxgraft® - and orthopedic applications, cancellous blocks, bone rings, wedges, etc.) originate from bone tissue of German, Austrian and Swiss living donors as well as from Austrian organ donors, only. These donations are performed in accordance with written consent from patients and applicable health and medical history. Exclusion of infectious diseases is granted by and full virus and bacteria testing, respectively. The processing and sterilization of the ALLOGRAFT CTBA bone replacement material is additionally secured by a bacterial and viral inactivation validation.

The starting material for a few selected products with a high proportion of cortical bone (e.g. cortical rings, stripes) is derived exclusively from Austrian organ donors from certified procurement centres. For all donors the highest ethical and safety-related requirements are met, so a donation will not be accepted without given consent of the donor by the C+TBA.

In case of questions feel free contacting Mr. Martin Hennes, CEO of C+TBA gGmbH or Dr. Monika Pichler.

Yours sincerely,

Dr. Monika Pichler
